

ABSTRACT OF THE DISCLOSURE

09/665 q81

5 A twinkle bulb light set includes, alternately from one end  
of the light set to an opposite end of the light set, at least one standard bulb  
socket configured and dimensioned to operatively receive a standard or steady-  
burning bulb and at least one non-standard bulb socket configured and  
dimensioned to operatively receive a non-standard twinkle bulb. The standard  
and non-standard bulb sockets are configured and dimensioned to operatively  
receive only standard and non-standard bulbs, respectively. Preferably the  
standard bulb socket is smaller than the non-standard bulb socket in at least one  
10 dimension such that the standard bulb socket cannot operatively receive a non-  
standard bulb, and the non-standard bulbs have at least one dimension greater  
than that of the standard bulbs, thereby to preclude operative receipt of a non-  
standard bulb in a standard bulb socket.
